GMC Spray Machine

The **GMC Spray Machine** is designed to mark sports pitches with controlled application rate, precision and at a pace that saves time and expense.

The machine features a large capacity liquid reservoir, high power electric pump driven by rechargeable battery, adjustable nozzle height and side-shields.

Provided the correct Sports Coatings liquid line marking compound is used at the recommended dilution, the **GMC Spray Machine** is easy to clean after use. To assist in cleaning we recommend **Sports Coatings GMC Powerflush**.

The consistent spray output ensures that lines are well defined and repeatable even when application is done in conditions unsuitable for transfer-wheel machines.

Special Properties

-  30 litre reservoir requires less frequent filling
-  Twin nozzle spray assembly - double mark in a single pass option
-  Full day's marking with fully charged battery - battery charger is included
-  Adjustable handle for a comfortable posture
-  User friendly controls
-  Large aperture filling port - quarter-turn quick-release tank lid
-  Easy access to pump and removable battery
-  Folding spray arm for safe machine transport
-  Robust construction

Uses The **GMC Spray Machine** should be used wherever line-marking to a high standard is required.

Optional equipment: athletics boom and rear carrying rack.

We recommend **GMC Spraymarker Premium**, **Spraymarker Standard** and **Sprayjet** for use in the **GMC Spray Machine**. **GMC Gold and Platinum** can also be used (please consult our Technical Services Department).
