Intercure_® 3240HG

%International

Direct to Metal Polyaspartic

PRODUCT DESCRIPTION

A two component, low VOC, high solids, fast drying polyaspartic high gloss primer/finish coating.

Intercure 3240HG provides improved productivity at ambient temperature application whilst combining the anticorrosive performance of epoxy coatings and high aesthetics of UV durable topcoats in a single coat application.

Intercure 3240HG is applied as a single coat direct to correctly prepared substrates using manual mix (single leg) or automatic mix (plural leg) application equipment, reducing application time, energy consumption and labour costs when compared to two coat applications, or single coat applications which require force drying at high temperature.

INTENDED USES

Specifically designed as part of the International 3200 product series for use as a single coat primer/finish coating system to protect construction and mining heavy machinery, agricultural equipment, railcars, transportation vehicles, material handling and lifting equipment, pumps, valves, gear units and other small motors and machinery.

Intercure 3240HG is particularly suited for use as a rapid drying system for fast handling times and maximizing production throughput at 20-25°C without the need for force drying at higher temperatures. This contributes to lower energy consumption in OEM fabrication and painting facilities.

The main features of Intercure 3240HG are:

- Single coat application with fast handling times
- Good adhesion properties over correctly prepared substrates
- Rapid cure at 25°C to provide energy cost savings
- High solids and low VOC emissions
- Eliminates the need for costly baking ovens or solvent burners

PRACTICAL INFORMATION FOR INTERCURE 3240HG

Colour	Colours available on request		

Gloss Level 85+ gloss units at 60° angle

Volume Solids 84% ± 2%

Typical Thickness 80-150 microns (3.2-6 mils) dry equivalent to

95-179 microns (3.8-7.2 mils) wet

Theoretical Coverage 7 m²/litre at 120 microns d.f.t and stated volume solids

281 sq.ft/US gallon at 4.8 mils d.f.t and stated volume solids

Practical Coverage Allow appropriate loss factors

Method of Application Airless Spray, Air assisted airless spray, Air Spray, Brush, Plural Component

Airless Spray, Roller

Drying Time

Overcoating Interval with recommended topcoats

Temperature	Touch Dry	Hard Dry	Minimum	Maximum
5°C (41°F)	90 minutes	4 hours¹	*	*
15°C (59°F)	45 minutes	3 hours¹	*	*
25°C (77°F)	30 minutes	2 hours¹	*	*
40°C (104°F)	30 minutes	90 minutes1	*	*

¹ The drying times quoted have been determined at the quoted temperature and 50% relative humidity.

REGULATORY DATA

Flash Point (Typical) Part A 53°C (127°F); Part B 81°C (178°F); Mixed 55°C (131°F)

Product Weight 1.36 kg/l (11.3 lb/gal)

VOC 152 g/kg EU Solvent Emissions Directive (Council Directive 2010/75/EU)

See Product Characteristics section for further details

Protective Coatings

^{*} Intercure 3240HG is designed as a single coat system.

Direct to Metal Polyaspartic

SURFACE **PREPARATION**

All surfaces to be coated should be clean, dry and free from contamination. Prior to paint application all surfaces should be assessed and treated in accordance with ISO 8504:2000. Oil or grease should be removed in accordance with SSPC-SP1 solvent cleaning.

Steel

Abrasive blast clean to a minimum of Sa21/2 (ISO 8501-1:2007) or SSPC-SP6. If oxidation has occurred between blasting and application of Intercure 3240HG the surface should be re-blasted to the specified visual standard. Surface defects revealed by the blast cleaning process should be ground, filled, or treated in the appropriate manner.

A surface profile of 40-60 microns (1.6-2.4 mils) is recommended. Lower surface profiles of 20-30 microns (0.8-1.2 mils) can be used to improve the overall aesthetics of the overall paint system.

APPLICATION

Mixing Material is supplied in two containers as a unit. Always mix a complete unit in

the proportions supplied. Once the unit has been mixed it must be used within

the working pot life specified.

Agitate Base (Part A) with a power agitator. (1)

Combine entire contents of Curing Agent (Part B) with Base (2)

(Part A) and mix thoroughly with power agitator.

Mix Ratio 2 part(s): 1 part(s) by volume

Working Pot Life 15°C (59°F) 25°C (77°F) 40°C (104°F) 5°C (41°F)

achieved only

International GTA713 Do not thin more than allowed by local

environmental legislation. Do not use alternative

thinners.

Cleaner International GTA713 Do not use alternative cleaners.

Work Stoppages Do not allow material to remain in hoses, gun or spray equipment. Thoroughly

flush all equipment with International GTA713. Once units of paint have been mixed they should not be resealed and it is advised that after prolonged

stoppages work recommences with freshly mixed units.

Clean Up Clean all equipment immediately after use with International GTA713. It is good

working practice to periodically flush out spray equipment during the course of the working day. Frequency of cleaning will depend upon amount sprayed,

temperature and elapsed time, including any delays.

All surplus materials and empty containers should be disposed of in accordance

with appropriate regional regulations/legislation.

PRODUCT CHARACTERISTICS

Intercure 3240HG is part of the International 3200 product series and is specifically designed for use where automated paint application and forced curing processes are in operation.

To ensure the correct use of International 3200 product series, it is recommended that the guidance in section 8.4 of ISO 12944-5:2018 is followed. Contact International Protective Coatings for further advice.

During the spray application of Intercure 3240HG at high relative humidity (>85%), a reduction in the quoted pot life time of the mixed material may occur. This can be resolved by placing sufficient solvent to cover the surface of the material in the can. The addition of approx 100 mls of GTA713 per 20 litre mixed unit should suffice.

Application at excessively high relative humidity, or under conditions where condensation is likely to occur, may result in immediate or premature loss of gloss. It is recommended that relative humidity should not exceed 85% during application and cure. Application at humidities greater than 50% may result in faster drying times.

Level of sheen and surface finish are dependent on application method. Avoid using a mixture of application methods whenever possible.

Care should be exercised to avoid the application of dry film thicknesses in excess of 200 microns (8 mils). Higher film thicknesses than recommended will result in higher gloss appearance.

Surface temperature must always be a minimum of 3°C (5°F) above dew point. When applying Intercure 3240HG in confined spaces ensure adequate ventilation.

The gloss levels quoted are typical values achieved with this product. This is subject to application method, dry film thickness and environmental conditions within a controlled OEM painting facility. It is always recommended that appropriate product application trials are carried out to ensure satisfactory levels are achieved.

As with other fast dry coating systems care should be taken to prevent overspray contamination of previously coated work pieces.

Note: VOC values are typical and are provided for guidance purpose only. These may be subject to variation depending on factors such as differences in colour and normal manufacturing tolerances.

SYSTEMS COMPATIBILITY

Intercure 3240HG is designed as a single coat system for application directly to correctly prepared substrates

ADDITIONAL INFORMATION

Further information regarding industry standards, terms and abbreviations used in this data sheet can be found in the following documents available at www.international-pc.com:

- · Definitions & Abbreviations
- · Surface Preparation
- · Paint Application
- · Theoretical & Practical Coverage

Individual copies of these information sections are available upon request.

SAFETY PRECAUTIONS

This product is intended for use only by professional applicators in industrial situations in accordance with the advice given on this sheet, the Safety Data Sheet and the container(s), and should not be used without reference to the Safety Data Sheet (SDS).

All work involving the application and use of this product should be performed in compliance with all relevant national, Health, Safety & Environmental standards and regulations.

In the event welding or flame cutting is performed on metal coated with this product, dust and fumes will be emitted which will require the use of appropriate personal protective equipment and adequate local exhaust ventilation.

If in doubt regarding the suitability of use of this product, consult AkzoNobel for further advice.

PACK SIZE	Unit Size	Part	A	Part B			
		Vol	Pack	Vol	Pack		
	15 litre	10 litre	20 litre	5 litre	5 litre
