

Bio TA

Biological Oil Stain Remover for Tarmac and Asphalt Surfaces.

A new approach to the removal of oil stains on Tarmac and Asphalt oil contaminated surfaces.

Bio TA is a biological oil stain remover that rapidly removes and digests oil contamination. Will not erode or degrade Tarmac or Asphalt surfaces.

KEY PROPERTIES

Containing a blend of biodegradable surfactants, biological enzymes and friendly bacteria to digest oil stains to completion, Bio TA penetrates and lifts oil stains and will not degrade tarmac and asphalt surfaces.

- Perfect for driveways, patios, paths, roads and car park surfaces
- Biodegradable
- Biological
- Tarmac friendly

APPLICATION

- Shake container before use (to put bacteria into suspension).
- Water wet the oil stain before applying Bio TA.
- Apply neat to the oil stain and brush in vigorously for 2-3 minutes.
- Leave for 10- 15 minutes.
- Water rinse.

TECHNICAL DATA

Appearance	Cream Liquid	VOC content	<5%
Bacterial count	2.0×10^7 cfu/ml	Flash point	>93°C
SG	1.01	pH	~ 8.0
BOD 5 days	1,800,000 mgs O/L	BOD 20 days	3,200,000 mgs O/L

NOTE

- For best results or for when using on larger stains, cover the treated area with polythene sheeting – ideally making a tent – and keep in place for up to a week. Ensure the area remains damp, but not flooded. Doing this provides a warm and damp environment, giving the bacteria used in Bio TA the best conditions to grow and digest the oil into carbon dioxide and water.
- Oil stains degrade Tarmac and Asphalt leaving behind an etched surface which appears as a dark stain – **this cannot be removed**.
- Bio TA is not suitable for use on synthetic oils, hydraulic fluid and wood oils.

PACKAGING

Containers: 12 x 1 Litre, 4 x 5 Litre, 20 Litre, 200 Litre and 1000 Litre

Kits: 1m² kit and 5m² kit (supplied with absorbent powder and instruction leaflet)

SAFE HANDLING AND STORAGE

Store in original containers and avoid extremes of temperature.
For guidance on handling and disposal, see Safety Data Sheet.
