Method Of Test For Fire Propagation For Products

A Report To: Mapei UK Ltd

Document Reference: 383127

Date: 25th May 2017

Issue No.: 1

Page 1

Registered Office: Exova (UK) Ltd, Lochend Industrial Estate, Newbridge, Midlothian EH28 8PL United Kingdom. Reg No.SC 70429 This report in issued in accordance with our terms and conditions, a copy of which is available on request.

0249

Executive Summary

Objective

To determine the performance of the following product when tested in accordance with BS 476: Part 6: 1989+A1: 2009.

Generic Description	Product reference		Thickness / application rate	Weight per unit area or density
A coated render system applied to a calcium silicate substrate	"Silexcolor Paint"		14.64mm *	15.17kg/m ² *
Individual components us	sed to manufacture com	posite:	·	
Top coat	"Silexcolor Paint"		2 x 0.2kg/m ²	1.46g/cm ³
Render	"Planitop 200"		3mm	1,300kg/m ³
Primer	"Silexcolor Primer"		0.15kg/m ²	1.1g/cm ³
Substrate	"Promat - Brandschutzbauplatten; Promatect-H"		12mm	870kg/m ³
*Determined by Exova Wa	arringtonfire		·	
Please see pages 5 & 6 of	this test report for the f	ull descrip	tion of the product	tested
Test Sponsor Mape 8HD	ei UK Ltd, Mapei House,	Steel Park	Road, Halesowen,	West Midlands, B62
Test Results: Fire	propagation index, I	= 0.	3	
Sub	index, i ₁	= 0.	1	
Sub	index, i ₂	= 0.	1	
Sub	index, i₃	= 0.	1

Test Details	
Purpose of test	To determine the performance of a product when it is subjected to the conditions of the test specified in BS 476: Part 6: 1989+A1: 2009, "Fire tests on building materials and structures, method for fire propagation for products".
	The test was performed in accordance with the procedure specified in BS 476: Part 6: 1989+A1: 2009, and this report should be read in conjunction with that British Standard.
Scope of test	BS 476: Part 6: 1989+A1: 2009 specifies a method of test, the result being expressed as a fire propagation index, that provides a comparative measure of the contribution to the growth of fire made by an essentially flat material, composite or assembly. It is primarily intended for the assessment of the performance of internal wall and ceiling linings.
Fire test study group/EGOLF	Certain aspects of some fire test specifications are open to different interpretations. The Fire Test Study Group and EGOLF have identified a number of such areas and have agreed Resolutions which define common agreement of interpretations between fire test laboratories which are members of the Groups. Where such Resolutions are applicable to this test they have been followed.
Instruction to test	The test was conducted on the 5 th May 2017 at the request of Mapei UK Ltd, the sponsor of the test.
Provision of test specimens	The specimens were supplied by the sponsor of the test. Exova Warringtonfire was not involved in any selection or sampling procedure. Exova Warringtonfire supplied the substrate.
Conditioning of specimens	The specimens were received on the 28^{th} April 2017 and were conditioned to constant mass at a temperature of $23 \pm 2^{\circ}$ C and a relative humidity of $50 \pm 5\%$ prior to testing.
Form in which the specimens were tested	Composite - Combination of materials which are generally recognised in building constructions as discrete entities e.g. coated or laminated materials.
Exposed face	The coated face of the specimens was exposed to the heating conditions of the test.

Description of Test Specimens

The description of the specimens given below has been prepared from information provided by the sponsor of the test. All values quoted are nominal, unless tolerances are given.

General description		A coated render system applied to a calcium silicate		
		substrate		
Product reference		"Silexcolor Paint"		
Thickness		14.64mm (determined by Exova Warringtonfire)		
Weight per ur	nit area	15.17kg/m ² (determined by Exova Warringtonfire)		
	Generic type	Silicate		
	Product reference	"Silexcolor Paint"		
	Name of manufacturer	Мареі		
	Colour reference	"Base P" (stated by sponsor)		
Top coat		"White" (observed by Exova Warringtonfire)		
(test face)	Number of coats	Тwo		
(lest lace)	Application rate per coat	0.2kg/m ²		
	Density	1.46g/cm ³		
	Application method	Brush		
	Flame retardant details	See Note 1 below		
	Curing process per coat	12 hours		
	Generic type	Cementitious		
	Product reference	"Planitop 200"		
	Detailed description /	One-component, fine-grained, water-repellent		
	composition details	cementitious skimming mortar		
	Name of manufacturer	Mapei S.p.A		
Render	Colour reference	"Grey"		
Kender	Number of coats	One		
	Application thickness per coat	3mm		
	Density	1,300kg/m ³		
	Application method	Trowel		
	Flame retardant details	See Note 1 below		
	Curing process per coat	2 – 8 hours		
	Generic type	Silicate		
	Product reference	"Silexcolor Primer"		
	Name of manufacturer	Мареі		
	Colour reference	"Clear"		
Primer	Number of coats	One		
Filler	Application rate per coat	0.15kg/m ²		
	Density	1.1 g/cm ³		
	Application method	Brush		
	Flame retardant details	See Note 1 below		
	Curing process per coat	24 hours

BS 476: Part 6: 1989+A1: 2009

	Product reference	"Promat - Brandschutzbauplatten; Promatect-H"
	Generic type	Calcium Silicate based board
Calcium	Manufacturer	Promat
silicate	Thickness	12mm
	Density	870 kg/m³
	Flame retardant details	The substrate is inherently flame retardant
Brief description of manufacturing process		See Note 2 below

Note 1: The sponsor of the test has confirmed that no flame retardant additives were utilised in the production of the component.

Note 2: The sponsor was unable to provide this information.

Test Results

Results

A total of three specimens were tested. The laboratory record sheet relating to each of the test specimens is appended to this report (refer to Tables 1, 2 and 3).

Throughout the test on each specimen careful observation was made of the product's behaviour within the apparatus and special note was taken of any of the phenomena listed in clause 9.2 of the Standard. None of the listed phenomena was observed and the test results on all three specimens tested were valid.

The following test results were obtained for the product.

Fire propagation index, I	=	0.3
Sub index, i ₁	=	0.1
Sub index, i ₂	=	0.1
Sub index, i ₃	=	0.1

NOTE: If a suffix 'R' is included in the above fire propagation index, I, then this indicates that the results should be treated with caution.

Applicability of test result The test results relate only to the behaviour of the test specimens of the product under the particular conditions of test; they are not intended to be the sole criterion for assessing the potential fire hazard of the product in use.

The test results relate only to the specimens of the product in the form in which they were tested. Small differences in the composition or thickness of the product may significantly affect the performance during the test and may therefore invalidate the test results. Care should be taken to ensure that any product which is supplied or used is fully represented by the specimens which were tested.

Validity The specification and interpretation of fire test methods are the subject of ongoing development and refinement. Changes in associated legislation may also occur. For these reasons it is recommended that the relevance of test reports over five years old should be considered by the user. The laboratory that issued the report will be able to offer, on behalf of the legal owner, a review of the procedures adopted for a particular test to ensure that they are consistent with current practices, and if required may endorse the test report.

This report may only be reproduced in full. Extracts or abridgements shall not be published without permission of **Exova Warringtonfire**.
