Products applied:	Centrecoat ProStrip
Location:	Plymouth
Date:	May 2021
Substrate:	Fibreglass
Project Work Undertaken:	To remove all existing coating from the Glass Fibre external structure prior to recoating.
Area Treated:	20 m2

Summary

A camper van body was needing refurbishing and part of this process required removing the existing coating from a glass fibre body without damaging this surface.

[Centrecoat ProStrip](#) was recommended, and following a successful test (as shown above) the process was successfully completed by applying the stripper and covering the surface with clingfilm. After leaving overnight the coating had softened and was easily removed by scrapping. The cleaned surface was then able to be repainted.

[Centrecoat ProStrip](#) is an easy to use water-based paint stripper, ideal for stripping paint, varnish, graffiti, powder coating, Artex®, stains, varnish and lacquer. It has a high level of penetration enabling it to go deep into thick coatings and work from the substrate up.
