

### Description

Centrecoat R104 Strong Adhesive and Paint Stripper is a powerful dichloromethane remover for non coated surfaces.

This product will easily remove all adhesives such as SBR, polyurethanes, epoxies, latex, acrylic and other polymeric materials. Centrecoat R104 will also remove stubborn polishes, wax, bitumen, and other difficult contaminants.

Suitable for use on wood, metal, brick, stone, concrete and masonry.

### Application

Always test the product on a trial area first to determine correct exposure time. Check surface compatibility before use. Health & Safety Data Sheets to be consulted prior to application. Suitable gloves, goggles and protective clothing should be worn. Protect any surface that does not require to be stripped.

Centrecoat R104 Strong Adhesive & Paint Stripper must be shaken well before use. Always apply generous even coats. Do not try to spread the product too far as this will result in poor penetration and faster evaporation. Allow Centrecoat R104 to do its work, do not try to remove too quickly. Never let the surface become too dry during treatment. Cover top with a cloth during opening to avoid splashes.

Apply generous even cover, do not brush out. Layer onto surface to be stripped with suitable brush. Leave until surface coating reacts (5-30 minutes depending upon surface resistance). For multi-layered surfaces (5 or more coats), a second application would be recommended with no need to remove the first coat. Scrape off, leaving surface as clean as possible. Rinse with clean cold water and allow to dry or use wire wool.

Avoid contact with painted, varnished, lacquered, plastic, polycarbonate or linoleum surfaces. Centrecoat R104 Strong Adhesive & Paint Stripper will DESTROY the coating on any surface it contacts.

### Technical Data

- Composition: Dichloromethane (Methylene Chloride)

### Clean Up

Clean tools and equipment immediately after use.

### Packaging

Available in 5 Litres
