Fast Dry Gloss
ID1580

Following the successful completion of the railings, bridge's and other street furniture at St. Katharine Docks by painting contractors A.J.R Renovations Ltd. the specifier at AJR suggested that the same CentreCoat painting system was adopted for the steelwork at Brentford Docks.

A member of the Promain specifications team attended a site meeting with the painting contractors

and the management agents at Brentford Docks Housing to discuss a redecorating program. The project consisted of the preparation and repainting of the railings, gates, garage doors, bollards and other items of street furniture.

The system that was agreed on was to manually prepare the surface with hand held wire brushes and wire brush attachments in electric drills, the use of 1/3 of a sheet sanders on large areas such as the garage doors and in certain areas of high corrosion a needle gun. Spot prime

any bare and rusted areas the apply a coat of CentreCoat single pack zinc rich primer. This was followed by a coat of the CentreCoat Fast Dry Gloss in black. Fast Dry Gloss is a single pack paint coating that contains polyurethane to help retain the gloss and increase the life expectancy of the paint.

The contract was carried out during the summer and every body was delighted with the finish and the tenant's were also delighted that their estate will now look good for many years to come.
