

Use Of Selemix Aqua On Brussels Metro

Location	Métro de Bruxelles, Belgium	PRODUCT Selemix Aqua Line Available in a Wide Range of Primers, Topcoats, Single Pack & Two Pack Coatings
Date	2015 onwards	
Products	Selemix Aqua Line	
Project Type	Train Components & Station Wall Tiles	
Owner	Federal Government of Belgium	

The local authorities had experience using PPG's Selemix Aqua range of products on train components such as bogies, garages for the bodies and internally as the plastic sheeting backing window surrounds. When the estimators were looking to find a new more economical alternative coating for the considerable areas of both floor and wall tiles, Selemix was an obvious choice with it's trusted reliability.

Requirements

The previous coating to the ceramic tiles had appeared to have a low scratch resistance leading to a short lifespan. With narrow time margins to work to, a replacement product needed to have a fast return to service, a high resistance to scratching and anti graffiti qualities. Upon discussion with the technical team at PPG Selemix, it was decided that Selemix Aqua 2k Single Stage Topcoat would be an ideal replacement coating.

Introducing Selemix Aqua

Selemix Aqua line is a standalone water-based system that meets the most demanding needs of most industrial coating applications such as infrastructure.

Selemix Aqua 2k Single Stage Topcoat is a water based paint formulated with polyurethane which will provide a high quality finish with excellent colour retention and durability, the paint is also highly resistant to weathering,

mechanical and chemical stress. It is available in either high gloss or matt finishes and can be tinted to most RAL, BS & NCS colour codes. Purchasable as separate hardeners and bases, the Selemix range has the complete flexibility for a multitude of applications without compromising on quality.

All PPG Selemix products are fully compliant with all current and planned future environmental legislation. They are currently being tested at Warrington for Class 0 and Class 1 Spread of Flame, smoke and toxic fume emissions to comply with LUL-S1085.

Selemix Aqua also dramatically reduces the VOC content compared to typical solvent-based industrial coatings.

Selemix coatings have become known for providing the highest quality coatings in sectors such as Construction, Agricultural Equipment, Light Industrial, Glass as well as Airport and Infrastructure environments. No matter which industrial or commercial sector you operate in, the Selemix Aqua line from PPG provides a high resistance to aggressive environments and long lasting performance required for serious use.
