7-820

Selemix  
7-610

A regular client contact the Technical Department at Promain regarding a large metal rubbish container that he had been asked to sand blast and apply a coat of paint to. The product that was selected was the 7-820 as a primer followed by the Selemix 7-610. 7-610 is a single pack, fast drying synthetic topcoat that is ideal for application directly to ferrous steel.

Selemix 7-610 has been formulated as a single coat paint that is ideal for use onto steel, black steel, light alloys, agricultural equipment, trailers, tractors, harvesters, ploughs, muck spreaders, rotavators, tillers, plant equipment, excavators, power barrows, screed pumps, earthmovers, dumpers, cars, trucks, bicycles, motorcycle, steel structures plus many more.

Our client was very specific upon the shade of red he required and Promain were able to offer him a vast range of RAL, BS and NCS colours.

The chosen paint system is also fast drying meaning time taken on application and downtime can be reduced, making significant cost savings this is especially useful when applying paint outdoors where airborne dust and debris could contaminate the drying paint.

If you would like further information on these products or any other Selemix products, please contact our Technical Department.
